

## CD/DVD Reproduction

*Mass CD/DVD reproduction is now an affordable reality*

Utilising a dedicated print production facility, we can offer competitive rates for full colour on-body printing to CD-Rs, CD-RWs, Mini CDs, Business Card CDs, all DVD media, floppy discs and USB pens. A print rate of up to 4000 units per hour is possible on a standard CD. All discs are burned and labelled to a high quality, identical to retail CD/DVD products.

There is a choice of packaging, from standard jewel cases, clear PVC wallets, Digi-paks, Lancing packs, DVD cases, or paper wallets.

You can supply your own media for printing, but if you wish to use our media we recommend TDK CD products. We usually use TDK 80 min CD-R and 4.7Gb DVD media, although 50Mb CD-R Business Cards, and 185Mb 8cm-wide CDs are also available.

Artwork for labelling can be supplied as positive film, right reading and emulsion UP. Sized 1:1, and at 120 lines per inch. When using solid colours a Pantone reference must be stated. Process printing using CYMK films will require a separate positive film for each colour (and this includes white, the alternative is to see the silver of the disc itself in any white areas). Artwork can also be supplied in more standard Illustrator AI or EPS formats, or as a high quality ready-to-print PDF file. PDF files are now the easiest and most common method of sending artwork.

Costs are calculated against the following criteria: per each colour on the label per CD/DVD; screen cost per colour; data duplication onto each disc; choice of packaging; and choice of media. We can also produce high-quality fold-over sleeves for you, based on your specifications.

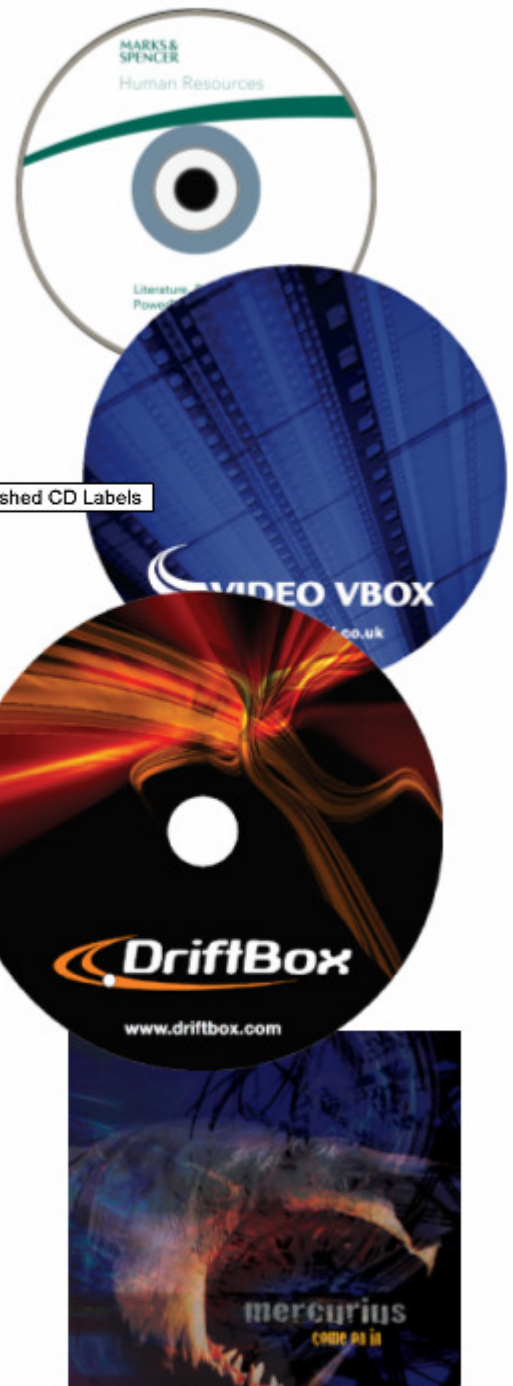

- Data per disc: CD 700Mb, DVD 4.7Gb
- Your labelling design professionally printed onto disc
- Larger batches produced at lower per-CD/DVD costs
- UK delivery usually within 4-10 working days of production start
- Large choice of packaging materials
- CD/DVD sleeves produced or designed for you
- Scent can be added to discs!

### Start CD/DVD reproduction

Contact us to discuss your content and quantity requirements and we will work out a costing structure for you. This will be calculated against the number of discs, label colours, type of disc, packaging, and data duplication requirements per CD/DVD.

Your order will then be processed (and even scented, if required!). Any required work on the labelling will be done, and the order will be processed, boxed, and shipped to you.

Whatever you need, we have the solution.

Fully professional CD/DVD labels are printed directly onto the disc body. Wrap-around sleeves are printed onto high-quality paper materials. Both can either be from originals supplied by you, or designed and constructed by us to your specifications.
